

# Louis Van der Velden

PRODUCT DEVELOPER

*Bridging design, technology and business.*

I am a proactive and versatile product developer who turns open-ended challenges into clear, viable solutions. I combine creative thinking with technical materialisation and commercial awareness, using sketching, prototyping and digital tools to bring ideas to life. I develop ideas thoroughly, anticipate challenges and select the right tools to test, visualise and improve them efficiently. As a people-oriented and initiative-driven team player, I take ownership, create structure and motivate people towards a common goal. I am eager to grow in a multidisciplinary environment and contribute to meaningful, feasible and viable products.
